ABSTRACT

This publication, based on a study of the teleconferencing capabilities of 825 community colleges, is designed to assist colleges and businesses in further developing and utilizing telecommunications resources. The survey was developed by Hezel Associates: (1) to document the existing telecommunications capabilities of community colleges; (2) to determine the telecommunications expansion plans and outlook at the community colleges; and (3) to document the teleconferencing services available for user groups at community colleges. The vast majority of the respondents currently have downlink capabilities for satellite video conferencing, and well over half have two-way videoconferencing capabilities. While half are already using some form of videoconferencing in the classroom, another 40% are interested in adopting distance education in the future. Just over half of the colleges with analog satellite downlink capabilities are planning to upgrade to digital downlinks in the next two years. Over 90% of the colleges surveyed indicated a desire to increase the use of video communications technologies in their institution and community. Staff development, workshops, and business meetings were the three most frequently used teleconferencing activities in community colleges. Following the findings is a directory of the facilities, which provides registration information, technical capabilities, programming services available, and contact information for each of the participating colleges. About AACC/CCSN

The **American Association of Community Colleges** (AACC) is a national association representing more than 1,100 community colleges and over 10 million students throughout the US. Established in 1920, the Association is headquartered in the National Center for Higher Education in Washington, D.C. AACC is a non-profit organization, providing leadership in six key areas: advocacy, policy, information resources, leadership and professional development, and coordination to promote community college issues and interests.

The **Community College Satellite Network** (CCSN) is a division of AACC, providing turnkey solutions and programming support to educational and business institutions nationwide. CCSN focuses on increasing education dissemination opportunities for its members and supports community colleges in their technology adoption efforts. To learn more about participating in CCSN, call 202/728-0200, ext. 206.

Teleconferencing Resources at U.S. Community Colleges

FOREWORD

Community Colleges have long been leaders in using new technologies to enhance teaching, learning, and access to quality educational resources. Our institutions bring together citizens from all backgrounds and circumstances, providing them with education, training, and services for a brighter and richer future. The American Association of Community Colleges (AACC) is the national advocate for these community colleges, seeking to increase public understanding of the mission and philosophy of community, technical, and junior colleges and their contributions to individuals and our nation.

This publication, ***Teleconference Resources at U.S. Community Colleges,*** is designed to assist community colleges and businesses in partnering to further develop and utilize telecommunications resources. Over ninety percent of the colleges surveyed indicated a desire to increase the use of video communications technologies in their college and community. It is a first step in assisting colleges wishing to develop a leadership role in the teleconferencing and distance education industry.

Over 825 institutions participated in this project. Their entrepreneurial spirit in developing their campuses as telecommunications resource centers for their communities is to be applauded.

AACC and its Community College Satellite Network look forward to increasing the awareness of community colleges as leaders in the innovative use of telecommunication technologies for education, training and services.

Dave Pierce
David R. Pierce
President/CEO
American Association of Community Colleges

EXECUTIVE SUMMARY

The Community College Satellite Network (CCSN), a service of the American Association of Community Colleges (AACC), contracted with Hezel Associates to design, develop, implement, and analyze research on teleconferencing capabilities of community colleges nationwide. The results indicate strong penetration and robust growth of videoconferencing in community colleges.

The goals of the research were:

❶ To document the existing telecommunications capabilities of community colleges;

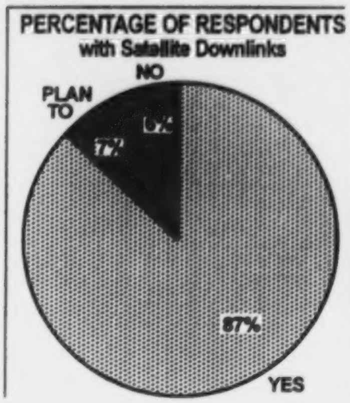
❷ To determine the telecommunications expansion plans and outlook at the community colleges;

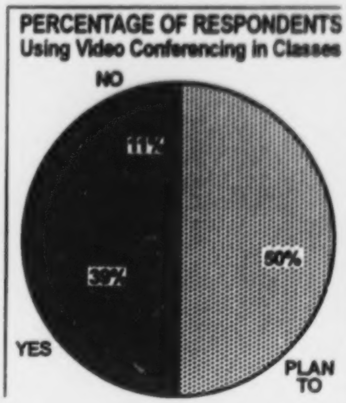
❸ To document the teleconferencing services available for user groups at community colleges.

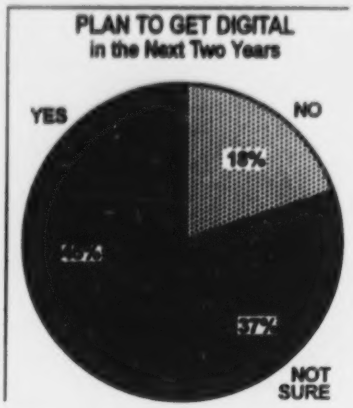
The goals were achieved via a survey administered to nearly 1400 community colleges across North America. More than 800 community colleges responded to the survey. The individual findings on each community college have been compiled into a database for user-groups, AACC members, administrators, and technology suppliers. This report presents aggregate numbers and trends in teleconferencing development at community colleges nationwide. The findings of the research are presented under two distinct themes: teleconferencing capabilities and ancillary teleconferencing services offered.

The vast majority of the respondents to the survey currently have downlink capabilities for satellite videoconferencing, and well over half of the community colleges have two-way videoconferencing capabilities. Almost all colleges are now involved or will be involved in distance learning in the near future. While half are already using some form of videoconferencing in the classroom, another 40 percent of respondents are interested in adopting distance education in the future.

Most of the respondents indicated that they would be interested in increasing their commitment to teleconferencing in the future. Just over half of the colleges with analog satellite downlink capabilities are planning to upgrade to digital downlinks in the next two years.





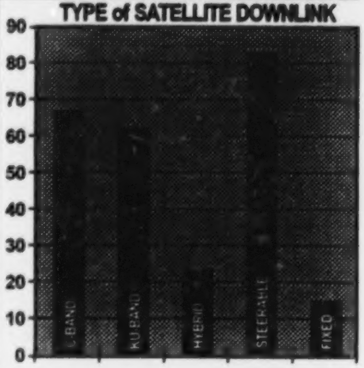


Programming activities reported via teleconferencing include a combination of academic, business, and community teleconferences. Staff development, workshops, and business meetings were reported to be the three most frequently used teleconferencing activities in community colleges.

With regard to types of programs desired by teleconferencing coordinators, education, business and health related programming led the list, followed by social or political programming.

Satellite Downlinks

About 83 percent of the community colleges have steerable downlink antennas. Two-thirds have C-band dishes and about the same number have Ku-band downlinks. Almost a quarter of all respondents have hybrid downlinks, and a small but growing number have digital satellite downlink capabilities.



Teleconferencing Services at Community Colleges

Almost all (85%) colleges indicated their interest in increasing the availability and use of their teleconferencing services by outside groups. More than 90 percent of community colleges are willing to let their facilities be utilized by external user groups. Of those who are interested in having their facilities utilized by external groups, 95 percent are open to accommodating non-profit groups, about 80 percent are open to accommodating for-profit organizations, and 30 percent would only accommodate educational groups.

INTRODUCTION & BACKGROUND

Introduction

The Community College Satellite Network (CCSN) is a service of the American Association of Community Colleges (AACC). CCSN provides its participating colleges, as well as other colleges, with teleconference programs of interest to college staff and students and the communities that the colleges serve. The CCSN teleconferences are live video presentations delivered via satellite. Teleconference participants in remote sites may interact with presenters and other participants via telephone questions and comments.

CCSN offers a variety of programs through its network of community colleges, but little of the programming is actually produced by CCSN. Instead, CCSN acts as a broker between program producers and college downlink sites. CCSN also promotes the programs through advertising and direct mail. Colleges, businesses, associations, and other organizations seeking to reach a particular audience with a program issue often approach CCSN staff for assistance in dissemination.

The promotional information offered by CCSN appropriately boasts that 95 percent of all American citizens live within commuting distance of a U.S. community college and, therefore, community colleges make ideal sites for a national conference, business meeting, or training via satellite. As part of its strategic plan, CCSN will continue to market its capabilities, along with the teleconference facilities and resources at local community colleges, to organizations that need a turnkey teleconferencing service.

Types of Resources at Community Colleges

In addition to the satellite teleconferencing production and uplink facilities and resources which CCSN brokers on behalf of participating colleges, most community colleges have satellite downlink capabilities, the least of which include a satellite receiver, receive antenna (or dish), VCR, and television receiver, often available in a classroom or conference room to accommodate teleconference participants. Those colleges that have invested more heavily in teleconferencing facilities own multiple downlinks, have built several very comfortable—sometimes plush—conference rooms with special lighting, audio systems, television screens, a cordless telephone, and a fax machine in the teleconference room. Most colleges have facilitators who are available to hand out materials, help with telephone and fax questions, deal with technical problems, and, generally, to make the teleconference a

BEST COPY AVAILABLE

comfortable and stimulating experience for participants. Free parking for participants is an additional incentive to get them to attend the teleconferences.

Some teleconferences can be protracted, day-long, or even multi-day events. Participants appreciate comfortable seating at tables; they are probably less inclined to remain involved while seated at student desks or in chairs without writing surfaces. For day-long events proximity to a restaurant or cafeteria is required, or the facilitator must arrange for catering; and for multi-day events, participants might need access to hotels.

Some colleges are technically capable of going a step beyond downlinking CCSN teleconferences. Through their telecommunications infrastructure they are also able to retransmit the teleconference to sites in other buildings, other campuses, and other cities.

The Research

The variety of teleconferencing resources at community colleges were known to CCSN administrators, but until this study was conducted, no systematic, comprehensive, up-to-date research had been undertaken on the subject. Not only did CCSN staff have a need to understand the capabilities of AACC member colleges, but it also needed a tool by which to promote the brokering capacity of CCSN and the reach of its member colleges. This research and the resulting directory fulfill those needs. As a by-product, it is expected that the directory will be useful to commercial organizations attempting to understand telecommunications resources at the colleges and wishing to market their products and services to those colleges. Therefore, the research had three goals:

❶ To document the existing telecommunications capabilities of community colleges, particularly for downlinking satellite teleconferences;

❷ To determine the telecommunications outlook and expansion plans at the community colleges;

❸ To document the teleconferencing services available for user groups at community colleges.

To conduct the research and prepare the report, CCSN contracted with Hezel Associates, an independent distance learning and telecommunications planning and research company in Syracuse, New York. Hezel Associates worked with the CCSN executive director, commission and the 1996 Instructional Telecommunications Council (ITC) Board in the research design and the instrument development.

survey questionnaire was mailed by AACC to learning resource directors at nearly 400 community colleges in the USA and Canada. Respondents mailed or faxed completed questionnaires to Hezel Associates. For non-responding colleges, a second mailing of the questionnaire was directed to college presidents, who, it was hoped, would assure that the appropriate person might receive and respond to the survey. Finally, Hezel Associates' staff telephoned non-responding presidents' offices and learning resources directors to achieve a higher rate of completion. Data from returned questionnaires were entered into the directory database and were aggregated and analyzed. The two parts of this report reflect both activities:

❶ The overview contains a summary of data collected through the questionnaire, and later aggregated and analyzed. It provides an understanding of telecommunications resources at community colleges in general.

❷ The directory lists all responding community colleges, and for each college, facilities and registration information, technical capabilities, programming services, and contact information.

The findings of the research are presented under two themes:

- current and future teleconferencing capabilities and;
- teleconferencing services offered.

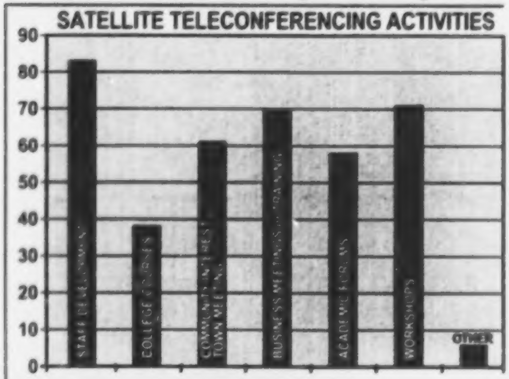
FINDINGS

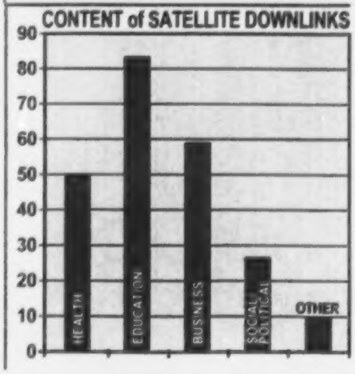
For the purposes of the study, teleconferencing is defined as a combination of satellite and terrestrial conferencing resources. Videoconferencing is defined, specifically, as T-1, fractional T-1, ISDN or ATM based conferencing over fiber. Satellite teleconferencing capabilities are defined as resources at a community college related to uplinks and downlinks.

Program Activities

Programming activities reported via teleconferencing include a combination of academic, business, and community teleconferences. Staff development, workshops, and business meetings were reported as the three most frequently used teleconferencing activities in community colleges.

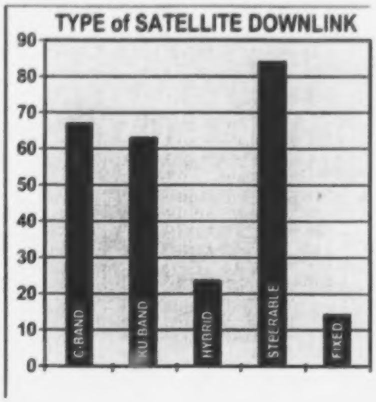
Regarding the type of programming content that the institutions would be most likely to downlink, respondents indicated educational programming most frequently (83%), followed by business programming (60%), and health related programming (50%). About one in four respondents indicated an interest in social or political programming.





Satellite Downlinks

The community colleges are well-equipped for the reception of programs via satellite. Many colleges have more than one downlink dish or antenna, some as many as five dishes. Eighty-three percent of the community colleges have steerable downlinks, while 13 percent are fixed. Respondents at 66 percent of the colleges have C-band downlink capabilities, and 62 percent reported having Ku-band capabilities. Almost a quarter of all



respondents have hybrid (C/Ku) downlinks. Looking toward the increasing digitization of satellite signals, 19 percent have digital satellite downlinks.

Two-way Videoconferencing and Distance Learning

The responding community colleges are not only prepared to receive programs via satellite, m[illegible]re also able to engage in two-way videoconferencing. An estimated 60 percent [illegible] community colleges have two-way videoconferencing capabilities, that are predominantly used for college courses, busi[illegible]etings or training, and workshops. Thirty-seven percent of the community [illegible]es reported using compressed video for teleconferencing with one-third [illegible]se respondents operating at full T-1. About 15 percent reported using multiple [illegible]adwidth, and 40 percent reported operating at fractional T-1.

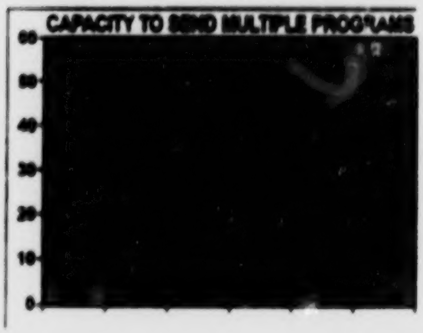
Telecommunication Infrastructure of Colleges

Community colleges have invested in a fairly robust local telecommunications infrastructure through which they are able to distribute programs. Fifty-three percent of community colleges reported being able to send video signals to multiple buildings on campuses, 33 percent reported having video transmission capabilities to another campus of the college, and 38 percent to K-12 schools. One in four respondents reported being able to send video programs directly to homes, and about the same proportion of community colleges reported being able to deliver video signals to businesses.



A variety of telecommunications systems are used by community colleges to distribute video signals to other sites. Cable TV (37%) and the telephone system (30%) are the most frequently used systems, while about 16 percent of commu-

BEST COPY AVAILABLE

nity colleges use satellite uplinks for distribution. Broadcast (15%), microwave (14%), and ITFS (12%) were used by somewhat fewer community colleges.

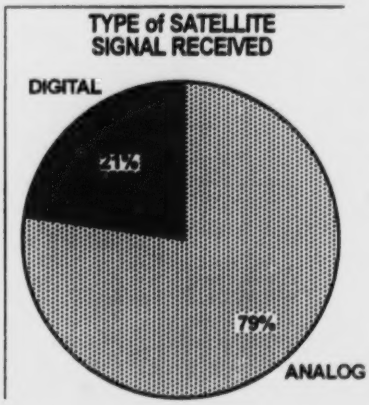
NOTE: Multiple responses were accepted, therefore the percentage total is greater than 100.

Future Plans for Migration to Digital

Most community colleges (85%) want to increase their commitment to teleconferencing in the future. Fifty-five percent of the colleges with analog satellite downlink capabilities are planning to install digital dowlinks in the next two years.



Of those community colleges with satellite downlinks, 21 percent currently possess digital downlink capabilities. Based on the responses, it may be projected that approximately 275 colleges will add digital downlink capabilities over the next two years. It may be noted, however, that two-thirds of colleges with digital downlinks continue to maintain an analog downlink also.

Availability of Teleconferencing Services for Outside Groups

Many community colleges have attempted to develop a profit center from their teleconferencing services. Others simply try to be helpful to the community. Twenty-two percent of the community colleges reported that their teleconferencing units were designed to be self-sustaining profit centers responsible for their own revenue generation. Surprisingly, another 41 percent of the respondents were not sure whether their units were expected to be self-sustaining.

TABLE 3

IS DEPARTMENT SUPPOSED TO BE SELF-SUSTAINING?	%	N
Yes	22	167
No	41	316
Not Sure	37	279
Total	100	762

In general, community colleges want to increase their respondents to teleconferencing services use by external groups (85%). Of those already open to external use, 95 percent accommodate non-profit groups, about 80 percent can serve for-profit organizations, while 30 percent would only accommodate educational groups.

More than half of the respondents report that their facilities are available any time of the week. Sixteen percent restricted the use of their facilities for outside users to weekdays only, 10 percent report offering services in the evening only, and 7 percent reported serving external groups on weekends only.

Physical Facilities

The comfort and quality of physical facilities can make a teleconference experience worthwhile, and organizations usually want to ensure that their participants have access to good facilities. With regard to seating, 41 percent of the colleges reported that they seat their users at tables, whereas 22 percent reported seating their users at student desks, and the remainder (37%) reported having only chairs for the teleconferencing users.

TABLE 7

Other aspects of comfort include food and lodging for those who might need it. Almost four out of five colleges have catering services available for external groups participating in teleconferences. Eighty percent reported access to a hotel within a five mile radius and only 5 percent reported not having a hotel within ten miles.

Communications Facilities

Almost all satellite teleconferences use one-way video. Interaction among the presenters, discussants, and remote participants is usually handled via telephone and fax, through which participants can ask questions and make comments. The availability of a telephone in the room allows participants to continue viewing the conference while waiting for their call to be handled. For individuals who choose not to talk by phone, a fax machine can transmit their questions or comments. More than 60 percent of respondents reported having fax services available, and 88 percent reported having a phone line in the teleconferencing room.

Access to parking, especially free parking, is valued by teleconference participants. On some campuses, no parking is available for outsiders, but on most, parking is free and open. More than 75 percent reported access to free and open parking, and about 20 percent indicated requiring payment or permit to park.

Marketing Efforts by Teleconferencing Units

In an effort to generate revenues for the teleconferencing units and, in some cases, to make the unit self-reliant, community colleges invest in marketing activities to promote their services. To promote teleconferencing services, about 40 percent of respondents reported using direct mail and brochures. Almost one in three use newspapers for marketing, 13 percent use video, and 8 percent reported using television advertising.

CONCLUSIONS

❶ The findings of the study imply extraordinary opportunities for teleconference organizations and programs to use the existing resources at community colleges for their nationwide or regional meetings. The colleges offer adequate physical support and facilities and technological infrastructure for corporations, associations, and educational institutions.

❷ The adoption of digital downlinks and videoconferencing over phone lines is a technological trend which will continue to grow over the next three years at community colleges.

❸ The teleconferencing resources at community colleges can be marketed successfully to potential users. Administrators working with CCSN, can find in their facilities abundant opportunities to develop a revenue stream from teleconferencing as well as provide a service to a variety of community members.

❹ Teleconferencing coordinators at community colleges are interested in expanding their infrastructure and facilities to make them competitive as participants sites. An extraordinary number, however, were not certain whether the facility was intended to be a profit center, which suggests that college administrators and distance learning coordinators jointly need to develop business plans for the facilities.

❺ Community colleges that have a mission to develop successful teleconferencing facilities will focus on the continuous improvement in several areas: needs assessment, market analysis, facilities enhancement, and teleconference marketing.

at U.S. Community Colleges

PART II

Teleconferencing Resource Directory

How to Use the Directory xv
Facilities Information 1–423
Glossary of Terms

HOW TO USE THE DIRECTORY

Teleconferencing Resources at U.S. Community Colleges is a compilation of data from some 850 community colleges. The directory is intended to offer the user information about teleconferencing capacity at each college. The user may wish to know about individual colleges or a group of colleges within a region or across the USA. The directory allows searching in multiple ways.

To use the printed directory

The printed directory is organized around states, which are ordered alphabetically. Within each state, colleges are organized alphabetically by the city in which they are located. If you know the name of a college but you do not know the city or state in which it is located, you may look up the college by name in Appendix B. Appendix A contains a list of all community colleges by state for quick searching if you know the state.

If you need to find data for several colleges, you should note which of the data entries (e.g., availability to organizations, compressed video rates, type of satellite downlink) are most important to you. Then you can begin to scan locations on the basis of those entries.

To use the electronic database

The electronic database permits automated searches based on several criteria. Upon entering the database, click on the "selector" button. The next screen allows you to enter criteria on key variables. First, under the "facilities available to" pull-down menu, choose the type of organization you represent. If you have a minimum or maximum size group you wish to be accommodated, enter those numbers in the respective boxes. Choose whether you want two-way video or satellite teleconferencing facilities. Finally, choose by the regions you want included in the search, either multi-state, single state, or metropolitan. For each category, the pull-down menu allows you to select the states or metro areas to search.

The database search engine operates more rapidly if the records are limited. If you want to limit the search to 100 records at a time, click on the box for that option.

Now click on "find" to search for the colleges according to your search criteria. Colleges and their locations will fill the display box. You may print the records for all colleges or develop a mailmerge file for labels or letters to each college's teleconferencing coordinator.

Scenario 1

You are a teleconference organizer for an association and you need to know what technical capabilities and conference facilities are located at which colleges in areas where your members are located. Then you want to contact the coordinator at each college.

Choose the cities and colleges located near your members. Determine which downlink capabilities those colleges have, then select colleges on the basis of the satellite technology you will use. Alternatively, search for community colleges that have the capability to downlink programs from the satellite transponder you have preselected.

Scenario 2

You wish to set up a meeting among members of your company or association at three locations in the USA. Select the type of organization you represent, then click on "2-way videoconferencing." Finally choose the cities or states where your members are located.

Scenario 3

Your association is offering a multi-day national teleconference. You need to find colleges that have hotels nearby, catering services, and comfortable seating. Start your search by locating colleges with those facilities open to your type of organization.

Scenario 4

You are a corporation seeking to have a one-on-one video discussion with a vendor or an employee at a remote location. Instead of traveling or using any of the commercial rooms, you can have your vendor or employee utilize the videoconferencing facilities at a community college nearby. Such an arrangement could save the reliance on commercial providers, reduce cost of travel, and provide ready access to user friendly services.

GLOSSARY OF TERMS

ANALOG:

Refers to an electronic signal described as being continuous in both time and amplitude which is in contrast to a digital signal which is discrete

ATM (ASYNCHRONOUS TRANSFER MODE):

High-speed packet switching technique suitable for transmitting voice, data, and video over a digital line. It uses cell relay transmission.

C/KU BAND:

Satellite frequencies exhibiting specific characteristics

COMPRESSED VIDEO:

Digital signals can be compressed by various methods to save bandwidth. Only the changes in the moving frames are captured and transmitted.

COMPRESSION TECHNOLOGY:

A technique that allows transport of multiple video signals within a 6 Mhz (or equivalent) bandwidth.

DATA SERVICE UNIT (DSU):

Simplified modem for the transmission of digital data over a private line, or for limited distance communications over the public switched telephone network (PSTN) where it is not necessary to comply with all the requirements for a high speed modem.

DATA RATE:

The speed at which a channel carries data, measured in bits per second (bps).

DIGITAL:

Information contained in the form of 0's and 1's for transmission on digital media, including fiber, microwave and satellite. Digital information may include video, audio, graphics and data

DISTANCE LEARNING:
Use of some form of electronic media to deliver instruction to students located at remote locations. Electronic media used for distance learning could inlcude the Internet, satellite broadcast, videoconferencing or audio/video cassettes.

DS1:
Digital signal level 1, a digital transmission format in which 24 voice channels are multiplexed into one 1.544 Mbps channel.

DS3:
Digital signal level 3; telephony term describing the 44 Mbps digital signal carried on a T3 facility.

FIBER OPTIC:
Thin glass through which light beams are transmitted.

FIXED DISH:
A downlink system committed to a single satellite source for programming.

HYBRID:
A system able to receive both C band and Ku band frequencies.

INTEGRATED SERVICES DIGITAL NETWORK (ISDN):
A fully digital communications facility designed to provide transparent end-to-end transmission of voice, data, video, and still image across the PSTN (Public Switched Telephone Network). Standards for this service are set by the CCITT. Access to the service is at one of two rates: The Basic Rate of 144 Kbps is provided as two B data channels of 64 Kbps and one D control channel of 16 Kbps; the second Primary Rate is SD1 or 2,048 Mbps in Europe and 1.544 Mbps in the U.S., Japan, and Canada, and is often referred to as 30B+D.

LATA:
Local Access Transport Area. The geographic area in which a local exchange carrier offer long-distance services.

LOCAL AREA NETWORK(LAN):
A system for linking terminals, programs, storage, and graphic devices at multiple workstation over relatively small geographic areas.

SATELLITE TELECONFERENCING:
Using satellite as a medium to deliver video

SNA:

Systems Network Architecture. A hierarchical, single-host network structure to support a cooperative-processing environment, whereby remote terminals link up with mainframes as well as each other in a peer-to-peer relationship [termed Low Entry Networking (LEN) by IBM].

SONET:

Synchronized Optical NETwork. A high-speed fiber optic transport network with transmission rates ranging from 51.84Mbps to 2.5Gbps.

STEERABLE DISH:

A downlink system that is able to receive programming from multiple satellite sources

T1:

Digital carrier facility used to transmit a DS1 formatted digital signal at 1.544Mbps; the equivalent of 24 voice channels. The European equivalent transmits at 2.048Mbps.

T3:

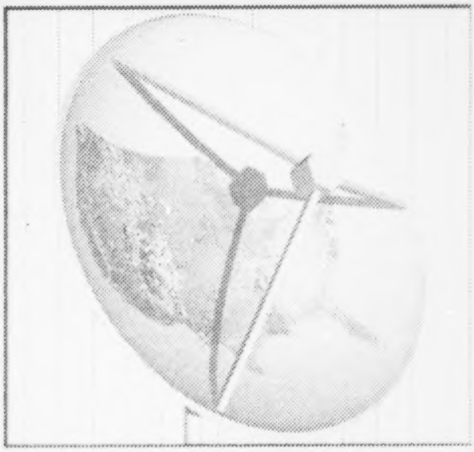
A 44.736 megabit T-carrier channel that can handle 672 voice or data channels at 64K bits/sec T3 requires fiber optic cable.

TRANSPONDER :

The designation that the carrier gives to the isolated frequency on a satellite. Most satellites have 24 transponders or channels.

VIDEOCONFERENCING:

Using terrestrial media such as T-1, ATM, ISDN to delivery video.



TELECONFERENCING
